

Operationalize Product Development with RequirementONE

Achieve product development success with an easy-to-use, but powerful, Requirements Management platform.

Overview

Many product development projects manage their requirements using a mix of spreadsheets, documents and shared drives. Others use engineering-focused tools or issue management systems. There is a better way. RequirementONE is a user-friendly solution for managing business and functional requirements, which helps you develop products that customers want and will pay for, while reducing time to market. It provides everything in one place: requirements, project plan templates, test plans, issue tracking, change management and stakeholder feedback.

Schedule a demo with one of our product experts

Our platform enables any kind of product development, including the following:

- High Tech
- Industrial Products
- Aerospace and Defence
- Pharmaceuticals
- Medical Devices
- Retail and Consumer
- Financial services
- Government and Public Service

Core Offerings

Manage specifications

Capture input from both internal and external stakeholders to define features of the new product. Full traceability of any changes to these requirements.

Streamline the requirement processing and trade-off

Enable all relevant team members and experts to work in parallel on the same data set to de-duplicate, cleanse, process, prioritize and decide on the features to be developed. Use the same system to convert the Market Requirements into Product Requirements or Agile Backlogs, or export to your existing engineering/software development solution as appropriate.

Optimize the implementation process

depending on what other project management systems you use, RequirementONE can also provide a templated approach to creating plans, linking tasks to requirements, assigning tasks, setting, configuration, testing, launch and user training.

"We would definitely recommend RequirementONE. The improvements we gained in efficiency, collaboration and productivity made choosing it an easy decision. DROP the Word and Excel and go to RequirementONE!"

Alianz

Cut Product Development Time to Market and Costs

- Each step of the process from requirements management, to product development, to testing and issue management will have significantly quicker turnaround time and lower cost.

Market/Business Requirements

- Store requirements, use cases and customer test cases as individual records.
- Full audit trails of changes.
- Define your own custom fields (attributes) for your data.

Product Requirements/Agile Backlogs

- Weight and sort your requirements to align with priorities.
- Explode market requirements into product requirements and/or Agile backlogs.
- Manage and track the delivery of the requirements/backlogs with full traceability.

Development Project

- Templated approach for rapid creation of best practice project plans.
- Linking of project plans and actions to product requirements or backlog to ensure completeness.
- Coverage of each development phase: Plan, Design, Build, Test, Launch.

Proven Technology

- High Availability
- Uncompromised Security
- Built for Scalability

Deployment Options

- Public Cloud
- Private Cloud
- On-Premise

Easy Integrations

- Import or export to Word and Excel
- Zapier middleware – 500+ applications
- Open APIs
- Accessible via tablets and smartphones

“RequirementONE was selected because it instantly added value through better collaboration, ease of use, full requirements visibility, traceability showing gaps in coverage, requirements status reports and impact of changes.”

Fulcrum Consulting

About Us

RequirementONE is a pioneer in freeing up content that is locked in documents, spreadsheets or binders on the shelf, and transforming them into structured actionable information. Our cloud-based platform is highly configurable, allowing for the accelerated delivery of solutions for compliance, business software implementation and product development. The unique Solution Store centralizes your internal best practices, and provides templates from industry experts. RequirementONE leads the way to more effective collaboration and reduced risk with consistent and rapid deployment of your projects.

Feature	Benefit
Easy to use by Product Managers and Stakeholders	
Much simpler to use than most engineering requirements/issue management tools	Move business and customer requirements capture from Microsoft Office based tools into an online maintainable system.
A Single Point of Truth	
A central online repository stores each requirement as a record. Updates, comments and meta-data are controlled and tracked individually.	No questions about what are the agreed upon product specifications.
Pre-defined Templates	
Models for best practice approaches can be selected from the Solution Store and customized to make them appropriate for your organization.	Reduce risk of errors and quick start of your project.
A Collaborative Platform	
The multi-user environment allows administrators control over which users have access to which project components.	Data is accessible to global stakeholders with no version control issues, promoting teamwork.
Dependency Linking	
Parent/child or sibling links show critical relationship between market requirements, product requirements/backlogs, feedback and issues.	Ensure completeness and traceability.
Transparency	
Documentation and reporting of all requirements, agreements, stakeholder feedback and progress.	Full visibility into the development process.
Reporting	
In-line analytics highlight gaps in coverage, traceability of changes and status of development efforts.	A dashboard to see the progress of projects.
